Resident Name:
Address:
Dallas Center, IA 50063

IMPORTANT NOTICE

The Environmental Protection Agency (EPA) has mandated new Lead and Copper rules for all drinking water systems. To maintain compliance with the EPA, Dallas Center Public Works asks that you fill out the questionnaire (on the back of this page) about the service lines that supply your water.

It is requested that you complete a survey for each account you have within the Dallas Center water system. If you need assistance in completing this, call to schedule a time for our employees to assist. This will require someone age 18 and older to be at home for our employees to be able to access the residence.

Below is a diagram to help you with identifying types of water pipes.

DC Water: Understanding your Water Service Pipe

<p>Types of water pipes Follow the guidance below or contact a licensed plumber to determine the material of your water pipes. To identify the material of your service pipe material on private property, check your household water service connection, typically located in the basement.</p> <p>Homeowners should identify and replace old household pipes, particularly galvanized plumbing and sources of lead. The type of household plumbing can vary throughout your household.</p>	<p>Lead  A dull, silver-gray color that is easily scratched with a coin. Use a magnet - strong magnets will not cling to lead pipes.</p> <p>Galvanized  A dull, silver-gray color. Use a magnet - strong magnets will typically cling to galvanized pipes.</p> <p>Copper  The color of a copper penny.</p> <p>Plastic  White, rigid pipe that is joined to water supply piping with a clamp.</p>
